**Randall Access Unveils the Randall Elevated Platform Concept  
at the 2013 International Food Distributors Association Conference**

- Randall Elevated Platform displays the latest evolution of safety, efficiency and flexibility
- Features advanced engineering and safety features
- Distinctive, driver friendly design punctuated by flexible delivery features
- Will be introduced to the marketplace in 2014

ELMHURST, IL, Dec. 11, 2013 – Randall Access' latest concept, the Randall Elevated Platform, was unveiled at the International Food Distributors Association (IFDA) 2013 Distribution Conference. With its emphasis on driver safety and efficiency, the platform showcases the future design and engineering direction of side-door access products.

“The Elevated Platform concept we showed at IFDA 2013 continues Randall’s engineering and design innovations that started with the Randall Straight and Folding Walkramps and Randall Steps,” said Fred Jevaney, Randall president. “The Elevated Platform is an intuitive, highly advanced platform that fully utilizes the platform floor allowing for a safer, more efficient side-door delivery option.”

Measuring 48”x 52” and constructed of 6061-T6 aluminum, the platform elevates to the trailer door - eliminating the use of a transition plate or a steep drop. The 3-step deployment and stowing process increases delivery speed and enhances safety. The ability to use the entire platform floor provides the driver greater maneuverability in and out of the trailer and a larger area to stage loads. In addition, full use of the platform floor allows the trailer to be fully cubed, increasing efficiency and profitability.

The platform’s adjustable mounting system ensures that the platform is in line with the delivery door whether retrofitted on existing trailers or installed on new trailers.

Randall Access’ commitment to create safer, more flexible delivery options is underscored by the ability to use the straight or folding walkramp off the platform either parallel or perpendicular to the trailer, depending on the delivery environment.

The platform also addresses the issues of temperature control and inventory pilferage. The ability to close the side-door during deliveries with the platform deployed decreases temperature loss and increases product integrity. Further, valuable inventory is protected from pilferage with the ability to close the side-door.

“This advanced platform concept promises drivers a safe, efficient, and flexible delivery experience that is also ahead of its time in meeting potential regulatory requirements,” said Jevaney. “We’re excited to bring a new generation of access products to the market.”

Randall Access will introduce this new Elevated Platform into its product offerings in the near future.

### **About Randall Manufacturing**

Randall Manufacturing is a leading manufacturer of insulated products that help maintain proper temperature control within refrigerated trailers, warehouses, and facilities across the country. What started with its flagship bulkhead line has grown into the most extensive temperature-control product portfolios for the logistics and warehouse industries.

Randall Access offers a full portfolio of trailer access products including walkramps, steps and soon, platforms for delivery vehicles. For more information about Randall Access and Randall Manufacturing, visit [www.randallmfg.com](http://www.randallmfg.com).
