## **Randall Access Introduces the Next Generation Side Door Delivery Platform**

*Lightning fast deployment to the trailer floor- less than 15 seconds - and the largest usable platform area on the market- Randall's Elevated Platform brings side door delivery and efficiency to a new level*

**Elmhurst, IL – December 4, 2014** – Randall Access introduces the first of its kind Elevated Platform that provides drivers with significantly improved side door delivery. This lightning fast platform deploys in less than 15 seconds and elevates to the trailer floor - without the use of a transition plate - providing full use of the expansive 48" x 52" surface area. The large, usable platform space is dual purpose: a first stop loading position, enabling the trailer to be fully cubed; and a large surface area to safely transition heavy loads from the platform to the walkramp. In addition, the Elevated Platform has been engineered to provide drivers with the flexibility of positioning the walkramp on the platform either parallel or perpendicular to the trailer. This latest innovation enables efficient side door delivery and the ability to fully cube the trailer. The end result is increased productivity and safety as well as increased revenue potential per trailer.

"We're excited to formally move the Elevated Platform from concept to market-ready," said Fred Jevaney, president of Randall Manufacturing and Randall Access. "It builds on our existing product line - straight and folding walkramps, and retractable steps - that provide drivers with great confidence to perform their jobs. As consumers demand more fresh and frozen foods, food distributors are taking a new look at side door delivery – because side door delivery is essential to effectively commingling fresh, frozen, and dry goods on one trailer. The delivery world is changing and the Elevated Platform has been engineered to provide drivers with the safest, fastest, and most flexible form of delivery today."

### **KEY FACTS – RANDALL ELEVATED PLATFORM**

- The Randall Elevated Platform is designed for side door delivery.
- The Randall Elevated Platform is fast and easy to operate – deploys in less than 15 seconds to door height; stows in less than 10 seconds.
- Its 48" x 52" usable platform area does not require a transition plate – there is no drop.

- The Randall Elevated Platform can be used as a first stop safety zone enabling the trailer to be fully cubed - leading to increased revenue potential per trailer.
- The Randall Elevated Platform is the only platform on the market that allows for a walkramp to be positioned either parallel or perpendicular to the trailer.
- The Randall Elevated Platform is fully protected within the enclosure which is constructed of G90 galvanized steel for added corrosion resistance.

“Randall Access products have demonstrated that highly engineered, innovative products like the Elevated Platform can have a tremendous impact on drivers and their organizations,” continued Jevaney. “We will continue to listen to the market and work alongside drivers to understand their challenges and bring new thinking to the delivery world.”

### **About Randall Access:**

Randall Access engineers and manufacturers delivery equipment with one purpose – bring drivers confidence. We believe when drivers are confident in their equipment underfoot – they are safer, more productive, and happier. We build walkramps, platforms and steps that deliver so drivers can deliver – better. For more information, visit the company’s website at [www.randallaccess.com](http://www.randallaccess.com).
