Randall Manufacturing: Introduces the Industry's First GREEN Line of Bulkheads

Chicago, June 16, 2011 - Randall Manufacturing, a Chicago-based manufacturer of temperature zoning products for the transportation and warehouse industries, proudly introduces the first GREEN line of portable insulating bulkheads to the transportation industry. Designed to meet the needs of today's refrigerated transporters, Randall Manufacturing's GREEN bulkheads reduce solid landfill waste, utilize reclaimed material, and provide the highest thermal properties on the market.

The GREEN bulkhead line is comprised of two exceptional models: the BH1500 and the flagship BH2000 portable bulkheads. The BH1500 and BH2000, manufactured with a 3"

Page 2

closed-cell foam, have set the industry standard for superior temperature zoning for over eleven years. Now, the BH1500 and BH2000 will also be available with a 100% polyisocyanurate (commonly known as “polyiso”) foam core which has been reclaimed from the roofing material of institutional buildings and spared from landfills. According to the Polyisocyanurate Insulation Manufacturers Association (PIMA), polyiso is cited by the U.S. Environmental Protection Agency for its responsible impact on the environment. In addition, polyiso is known for its excellent compressive strength, recycled content and zero ozone depletion potential. These are critical features states Fred Jevaney, President of Randall Manufacturing, “not only from an environmental perspective but also from a performance perspective - it differentiates our bulkheads from the rest in the industry as the R-value is approximately 30% higher than that of the average bulkhead in the market. We have created a new bulkhead standard by increasing the insulation performance and reducing solid landfill waste. It’s an exciting time for us.”

The GREEN bulkhead line has been engineered to meet the needs of the widest variety of users. Both GREEN bulkheads share the polyiso foam core, yet offer alternative skid guards, perimeter seals, and exterior skin options. The GREEN bulkhead line is a continued example

of how Randall Manufacturing furthers its reputation as an innovator and customer-centric in the temperature zoning industry.

Randall Manufacturing has been recently recognized by *Food Logistics* magazine as one of the grocery and food service distribution industry's Top 20 Green Supply Chain Partners for its Green line of bulkheads. "We are honored to be recognized among the leaders in the industry who are developing innovative products that help our customers meet their "green" goals while creating a greener, cleaner future for everyone," continued Fred Jevaney.

About Randall Manufacturing

Randall Manufacturing is taking a stand against solid landfill waste. As an integral part of the company's sustainability program, Positive Impact, the company is committed to environmental and community stewardship. Randall Manufacturing is an industry leader in temperature zoning products, delivering a complete portfolio of integrated product solutions to the transportation industry – insulated portable bulkheads, center divide systems, strip curtains and chutes. In addition, their specialty warehouse products include insulated, flexible curtain walls and air doors plus insulated boxes, bags and pallet covers.
