Increase Refrigerated Warehouse Space and Temperature Zones Without Increasing Building Footprint

Chicago, May 29, 2008 - Randall Manufacturing, a Chicago-based manufacturer of temperature zoning products for the warehouse and transportation industries, is pleased to announce that their line of InsulWall products (a flexible, insulated curtain wall) has been expanded to include R-values ranging from 3 to 10. It's the ideal temperature zoning solution for both retrofit and new construction warehouse applications because it works well for buildings with space limitations and little flexibility. Subdividing warehouse space with a new temperature zone has never been this easy.

InsulWall can be used in varied applications including ambient to controlled, cooler-to-cooler and freezer-to-freezer. The ideal temperature differentiation is up to 20 degrees Fahrenheit. In addition to creating more temperature zones, InsulWall effectively maintains product integrity. An excellent example is the separation of ethylene sensitive produce (apples) from ethylene-sensitive produce (blueberries).

Not only does InsulWall act as an excellent source of insulation and helps to improve product integrity, but it also requires minimal space. InsulWall can assume as little as 1" of floor space compared to its alternative; permanent walls or rigid panels with concrete curbs can take up as much as 16" of floor space.

InsulWall is easy to install. Depending on the facility, 100' of InsulWall can be hung in as little as 10 hours. Plus, no facility shut down is required during installation. Should floor plan or product requirements change InsulWall panels are easy and fast to remove and relocate. The bottom sweep is simply trimmed and the curtain is easily augmented to accommodate varying ceiling heights.

Not only is it quickly installed but it is also quickly repaired. The soft wall feature allows for flexibility. If there is extreme force applied to the curtain wall the Velcro tabs between the panels may release but they can be refastened in a matter of minutes. The benefits of this product are limitless.

Randall Manufacturing is an industry leader in temperature zoning products, delivering a complete range of integrated product solutions to the food service industry. Their specialty warehouse products include insulated curtain walls and air doors plus insulated boxes, bags and pallet covers. Transportation items include insulated bulkheads, center divide systems, strip curtains and chutes. For more information about Randall Manufacturing, visit their website at www.randallmfg.com.
