

Safe Fleet continues portfolio expansion with Randall Manufacturing Acquisition

January 13, 2017 – Safe Fleet is pleased to announce the acquisition of Randall Manufacturing LLC (“Randall”).

Established nearly 20 years ago in suburban Chicago, Illinois, Randall is a leading manufacturer of specialized products used mainly in refrigerated semi-trailers in connection with the transportation of food and beverages.

Randall’s Temperature Control Products division provides insulated partitions, known as bulkheads and center divides, that are used to segregate refrigerated trailers into different temperature zones. Randall Access products provide safety and productivity solutions across any type of truck or trailer.

“Randall is an excellent addition to Safe Fleet’s portfolio. Through innovation and consistent execution they have developed a high level of brand equity and trust with their customers and end-users,” stated John Knox, CEO of Safe Fleet. “The Randall brand and product line strongly complement the ROM and Bustin brands of Safe Fleet’s Truck and Trailer offerings. We are delighted to welcome Fred Jevaney and the Randall organization to Safe Fleet. Fred will manage the combined Randall and Safe Fleet Truck and Trailer businesses.”

“This opportunity with Safe Fleet is compelling for our customers and our employees,” said Fred Jevaney, Randall CEO, who has been with the company since inception. “I’m excited to continue leading Randall as well as the Safe Fleet Truck and Trailer business and expanding our customer offerings and solutions. The broad product offerings within Safe Fleet will allow us even greater opportunity for growth and serving our customers.”

Financial terms of the purchase were not disclosed.

About Randall Manufacturing

Since 1996, Randall Manufacturing has been serving the foodservice delivery industry with products that protect inventory, improve productivity, and promote safety. It is a leading manufacturer of specialized products used mainly in refrigerated semi-trailers in connection with the safe and efficient transportation of food and beverages. Customers include food distributors, food retailers, and other fleet operators to ensure food quality, driver safety, and productivity. It operates under three divisions Temperature Control Products, Access Products and Warehouse Products out of two facilities located in suburban Chicago, Illinois.
