Randall Temp Control Launches a Pull Down Trailer Curtain to Protect Inventory and Meet FSMA Requirements

- Randall Temp Control's Pull Down Curtain Features a New Retractable Design That Provides Optimal Temperature, Humidity, and Environmental Control
- Next Generation of Randall's Temperature Control Trailer Products are Designed to Protect Perishable Inventory, Minimize Risk of Loss, and Meet the Food Safety Modernization Act's Requirements

ELMHURST, ILLINOIS – February 14, 2017 - Randall Temp Control today announced a new trailer curtain offering: Rear and Side Pull Down Curtain (RPDC) and (SPDC), respectively. The curtain's new retractable design is field-tested to help foodservice distributors and grocery distributors, in particular, strengthen their temperature control posture by providing an easy to operate, unique perimeter brush assembly to contain air flow, and driver and loader friendly unobstructed pass through.

"Today's demands on the supply chain with the enactment of the Food Safety Modernization Act (FSMA) are driving temperature control innovation and agility," said Fred Jevaney, president of Randall Temp Control, a Safe Fleet brand. "We are designing and manufacturing new products that leverage our temperature control experience to help minimize risk, reduce energy costs, and protect perishable inventory."

With the emergence of FSMA, temperature control and product integrity are increasingly interconnected and data driven. By providing effective temperature control at the rear and side trailer doors, distributors can reduce trailer temperature fluctuations, protect inventory from environmental elements, and increase efficient equipment utilization while bringing confidence in meeting FSMA requirements.

Randall's Rear and Side Pull Down Curtain provides:

- Easy and quick operation with its retractable design
- Superior air flow control
- Universal door style accommodation
- Improved safety and protection of inventory integrity

The Rear and Side Pull Down Curtains provide an additional product offering to meet driver and loader's changing requirements, especially at the dock area.

About Randall Temp Control

Randall Temp Control, a Safe Fleet brand, has been serving the foodservice delivery industry with products that protect inventory, improve productivity, and promote safety. It is a leading manufacturer of specialized products used mainly in refrigerated semi-trailers in connection with the safe and efficient transportation of food and beverages. These products include insulated, portable bulkheads, center divide systems, rear and side door curtains, and insulated pallet covers, blankets and portable containers.
