Port Jersey Logistics Realizes One Year ROI With InsulWall®

- *3PL Port Jersey Logistics required a heated room to store olive oil at 80°F for 24-48 hours*
- *Randall Manufacturing's InsulWall® was installed to create the temperature-controlled room*
- *Port Jersey Logistics realized a one-year return on investment based on energy-savings*

Elmhurst, IL - January 22, 2015 – Port Jersey Logistics, a growing third-party logistics (3PL) provider based in New Jersey, faced an interesting challenge. Due to the temperature fluctuations during transit, olive oil changes color after it arrives from Italy. In order for the olive oil to regain its natural color, it is heated at 80° Fahrenheit for a period of 24-48 hours. The challenge for Port Jersey Logistics was how to create a cost-effective, temperature-controlled room to store olive oil without using permanent walls.

“We were initially using an industrial vinyl wall to partition the space,” said Galo Panchi, facilities manager for Port Jersey Logistics. “Our heating expenses were through the roof. InsulWall was evaluated as a flexible, modular insulated wall solution as an alternative to a permanent wall.”

Port Jersey Logistics is a food-grade, AIB approved and organic certified (as well as FDA registered) full-service 3PL. It serves the food, beverage, and personal care products market. Temperature and humidity-controlled space is a growing trend for these businesses. The challenge for 3PLs like Port Jersey Logistics is to provide temperature and humidity-controlled areas while retaining the ability to move or expand walls as clients' needs change.

Port Jersey Logistics used InsulWall to create the heated room for olive oil (as well as additional cooler rooms) at their new 700,000 square foot food-grade, public warehousing space. InsulWall's GREEN interior insulation sandwiched between tough, exterior vinyl forms a flexible, insulated wall solution that easily creates temperature and humidity-controlled rooms. By not building a permanent wall, Port Jersey Logistics maintained the ability to reconfigure its warehouse space without costly wall removal and construction.

Based on the savings realized in energy costs, InsulWall paid for itself in one year.

“InsulWall helps us meet our clients’ demands with its ease of installation, ease of maintenance, and ability to create cooler and heated rooms economically,” added Panchi.

About Port Jersey Logistics

Port Jersey Logistics is a full-service third-party logistics provider with state-of-the-art systems and facilities to meet a broad range of logistics and warehousing requirements. All Port Jersey Logistics locations are certified food-grade, AIB approved and organic certified, as well as FDA registered. They serve the consumer-packaged goods, specialty foods, food ingredients, health and personal care products, and alcoholic beverages. Visit www.portjersey.com for more information.

About Randall Manufacturing, Warehouse Division

Randall Manufacturing has been providing flexible wall solutions to warehouses, distribution centers, and workplaces for over fifteen years. With an eye for sustainability, Randall was the first modular wall manufacturer to utilize recycled materials to meet the growing need for GREEN building materials (and that contribute to LEED® scores). Its product offerings include the insulated, modular curtain wall – InsulWall®; warehouse divider curtains – Randall Industrial Curtain Walls; and insulated pallet covers.
